1 Introduction

The Bacti-Cinerator Sterilizer is a gasless, flameless sterilizer for use with inoculating loops and needles. Sterilization is accomplished through infrared heat without dangerous spattering of microorganisms.

Before starting up this unit for the first time, please read the rest of this operations manual.

1.1 Structure Description

Heater element

Red indicator light

Green indicator light

Toggle switch

Electrical cord

3 Operating Instructions

3.1 Remove any packaging that protects the Bacti-Cinerator Sterilizer from being damaged during shipment.

3.2 Plug the electrical cord into the appropriate outlet. The unit must be properly grounded.

3.3 The red indicator light will come on when the toggle switch is in the “High” position. Twenty minutes after the Bacti-Cinerator Sterilizer is plugged in, the optimum sterilizing temperature (825°C) will be reached. If the unit is not going to be used for extended periods of time, please set the toggle switch in “Off” position to conserve the life of the heater element.

When the instruments in green light, the machine temperature is around 500°C. It can run 8 hours continuously, but it's the max. And pls don't use the machine in the night when no one was there.

⚠️ Note: If the unit keep the sterilizing temperature (825°C) over three hours, please set the toggle switch in “Low” position for half an hour, then set the toggle switch in “High” position again. This will conserve the life of the heater element too. The green indicator light will come on when the toggle switch is in the “Low” position.

3.4 Gently insert the loop or needle, attached to an insulated loop holder, into the heater element. Avoid scraping the sides of the element to ensure the longevity of your loop and heater element. The loop should remain within the heater element a minimum of five seconds.

3
4 Precautions and Maintenance

4.1 Only insulated loop holders should be used when inserting inoculating loops or needles into the heater element.

4.2 The Bacti-Cinerator Sterilizer is not intended for use with scalpels, forceps or any sharp objects. The use of such objects can cause element malfunction and void the heater element warranty.

4.3 Visual inspection of the heater element should be performed periodically to determine if the heater element core is worn. Inspect for small cracks and residue buildup in both the cool and heated conditions. In the heated condition, cracks can be seen as small, intensely yellow-orange fissures. If any defects are noted, the heater element should be replaced before element malfunction occurs.

4.4 The inoculating loops and needles should not be allowed to set in the heater element for extended periods of time. This will cause the loop holder to become extremely hot and increase the wearing of the loops and needles.
5 Warranty Information

5.1 The Bacti-Cincerator Sterilizer unit itself (without heater element) is warranted for one year against defects in material and workmanship. The warranted life of the heater Element is six months.

5.2 This warranty becomes effective when the ultimate user receives the product and will be based on proof of purchase or date of invoice.

5.3 Should damage to the instrument occur due to improper use or improper maintenance, this written warranty is void.
